## PREFACE

A "Statistical Year Book" for the Dominions of His Exalted Highness the Nizam, on the model of the Statistical Abstract for British India and the book of like description published by the self-governing Dominions of Australia, Canada and New Zealand, has been the aim of the Department of Statistics, for some time. While endeavouring to collect statistics for the second volume of the decennial "Statistical Abstract" and "District Gazetteers" it was thought desirable to enlarge the scope of the former. As a first step in that direction, standard forms drawn up on the lines of the British India Statistical Abstracts were supplied in duplicate to all the Government and quasi-Government Departments requesting them to furnish statistics, one set for the years 1331 to 1340 Fasli and another for 1341 to 1344 Fasli. They were also requested to keep supplying annual statistics at the end of every Fasli year. Many departments failed to furnish statistics and so a touring party visited the different district offices for detailed statistics and another the head offices in the Capital. In spite of such special efforts, the statistics received are still incomplete. Retaining the first set of figures (1331 to 1340 Fasli) for the second volume of "Statistical Abstract" the second set of statistics (1341 to 1344 Fasli) so far as they are available are set forth in the present issue of "Statistical Year Book" which is the first of its kind. In future "Agricultural, Industrial and Trade Statistics" which in 1343 Fasli reached its seventh number will not be published as all such statistics will be incorporated in the "Year Book". The value of the "Statistical Year Book" cannot be overestimated. With the expansion of education, trade and industry the thirst for up-to-date statistical information is growing and the Year Book not only obviates the necessity of having to consult different publications of the different departments but contains figures not available in the usual departmental reports.

**Season and Crop Report for 1343-44 Fasli**

## SEASON AND CROP REPORT

1343-1344 FASLI (1934-35 A.D.)

This report deals with rainfall, agricultural and market conditions during the year ending 15th Thir 1344 Fasli

### General

Agricultural conditions during the year were less satisfactory than in the preceding year. The showers, which usually fall in the latter half of Thir, as a prelude to the south-west monsoon, were very insignificant, there being only 9 cents during the fortnight. The monsoon itself arrived late and did not manifest itself effectively till the end of Amardad (beginning of July). Kharif sowings, which generally commenced with the pre-monsoon showers in some places, did not begin till the second week of Amardad (June) and that too sparingly. The vagaries of the monsoon in its early stages were marked in parts of Marathwara Rainfall, on the whole, was illiberal and unevenly distributed. These causes contribute to a fall in acreage and outturn of rain-fed crops in a general way. A redeeming feature, however, of these factors was the appreciation of the retail prices of rice and jawar; but the price of wheat, due to extraneous circumstances, noticeably depreciated.

### Rainfall

(a) *South-West Monsoon of 1343 Fasli.*  
(16th Thir 1343 to Aban 1343 Fasli).

During the first three weeks of Amardad (June) it only drizzled in most parts, the weekly average fall amounting to a few cents. Consequently the sowing operations of kharif and abi crops were held up in certain areas. The rain, which fell up to the 25th Amardad, was deficient in every district, it being as much as three inches below normal in Medak and Nizamabad. Anxiety was felt for the seed already sown. Subsequently the monsoon became active and yielded the much-needed rain. Although it was light to moderate over a large area, it helped to relieve anxiety. Sowing was resumed and the early sown crop was seen coming up above the ground. Scarcity of water and fodder

experienced in some tracts was mitigated to a certain extent. It continued to rain, more liberally in Telingana, Adilabad receiving  $6\frac{1}{2}$  inches in a week, while Raichur registered only 90 cents.

At the end of the first month (Amardad) of the monsoon the rainfall had averaged 6·20 inches, or 1·10 inches less than that registered during the same month last year and 72 cents more than normal. The districts which showed a deficit were Baghat, Medak, Aurangabad, Osmanabad, Bidar and Bir. Gulbarga and Raichur had approximately the same as normal.

The first week of Shahrewar (July) was characterised by strong high winds and light rains averaging 1·65 inches. The soil moisture in Marathwara districts was inadequate and the general weather conditions were not favourable for a normal growth of the tender crop or for the germination of the late sown seeds. A general need of rain was, therefore, expressed in Marathwara. During the whole of the following week, the monsoon held off, except for 14 cents of rain, at a time when sowing was well under way and the early sown crop reached the first weeding stage. The situation caused some anxiety in parts of Karimnagar, Aurangabad, Bir, Gulbarga, Osmanabad and Raichur, where the tender crop began to wither. Subsequently, though the monsoon strengthened, the fall was unevenly distributed so that more rain was in demand in Bir, Gulbarga and Raichur districts, most especially in the last, to sustain the languishing crop and to complete sowings.

Before the end of Shahrewar, however, moderate to heavy rain fell, the highest amounts being 13·19 inches in Ambad (Aurangabad) and the lowest 1·21 inches in Iluzurnagar (Nalgonda). It rained heavily in Raichur, which during the last week of the month, registered 6·30 inches. By this substantial fall the moisture need of the crop in this district was more than met. From the beginning of the monsoon to the end of Shahrewar the total fall for the Dominions averaged 17·23 inches, as compared with 12·08 inches normal for the two months. Abnormality was most marked in Bidar (7·70"), Nander (6·76"), Osmanabad (6·51"), Parbhani (6·30"), and Mahbubnagar (6·10"), Raichur had 4·53" above normal for the period.

Early in Mehr (August) only light showers fell. It was a welcome change in the low-lying tracts, where the heavy and continuous falls of the preceding week were tending to discolour the crop, but the period of slackness was brief and the monsoon renewed its activity and rained heavily in many regions : Kannad (Aurangabad) recorded 18" while Karinnagar, Adilabad and Warangal districts had 5 inches each. In these parts such heavy falls interrupted seasonal field work and a break was desired, but in some others such as in Shahpur (Gulbarga) and Sindhmur (Raichur) only sporadic showers fell and moisture being already impoverished, crop showed signs of distress. For a fortnight thereafter a spell of warm weather with occasional light showers prevailed. Crop in places, where excessive soil moisture was injurious, improved but in droughty tracts suffered. Before the end of Mehr a change in the weather conditions resulted in widespread rainfall; light in Gulbarga and Raichur and moderate elsewhere. More rain was imperative in parts of Shorapur and Shahpur (Gulbarga) and Gangawathi and Sindhmur (Raichur), where crops continued to wither.

Since the beginning of the monsoon 23.51" had fallen, as compared with 23.67" in the same period in the preceding year and a normal of 17.08". Osmanabad was 8.77" in excess of normal, Warangal, Karinnagar, and Bidar 8½" each, Nander 8", Gulbarga 4" and Raichur 3".

The monsoon was inactive in Aban (September) the last month of the season. For three weeks only light and scattered showers fell at long intervals. Consequently when grain was ripening, soil moisture had almost exhausted in some parts of Medak, Nizamabad, Mahbubnagar, Bir and Nander, while in a few parts of Nalgonda, Gulbarga and Raichur crop continued to wither. The monsoon in its retreating stage yielded some showers, which, in places, were very meagre.

Thus the south-west monsoon of 1343 Fasli accounted for an average of 27.84 inches, as compared with 31.69 inches in the same period last year or 3.64 inches above normal but Baghat was nearly 3 inches, Raichur 1.28 inches, Gulbarga 20 cents and Nalgonda 10 cents short of normal.

(b) *North-east monsoon of 1344 Fasli.*  
(Azar 1344 to Dai 1344 Fasli).

The north-east monsoon was uneventful. The average fall was nearly 8 inches, the same as for the previous 14

years. In parts of Raichur district it rained liberally during the last week of Azar (October 1934). The share of the Gangawathi taluka of the same district being 8 inches, it ameliorated the condition of the standing crops there. In the first week of Dai (November 1934) a few showers fell and interfered with the crops under harvest.

(c) *Intermediate period : (Bahman 1344 to Thir 1344 F.*

The subsequent weeks until the end of Isfandar (January 1935) were practically dry and the season was favourable for cotton picking and harvesting of kharif and abi. The moisture needed for rabi was adequate except in parts of Raichur and the crop was weeded at intervals. In parts of Raichur crop began to wither and in a few areas of Aurangabad, Bir, Mahbubnagar and Gulbarga it suffered either from cloudy weather, plant disease or severe cold.

The last week of Isfandar 1344 Fasli (January 1935) and the first week of Farwardi (February 1935) saw some light showers accompanied by hailstorms in parts, which slightly damaged rabi in the harvesting stage.

Khurdad (April) was showery in parts and hailstorms were reported from Medak, Mahbubnagar and Karimnagar, where rabi under harvest was affected a little. This was nearly dry and weather ideal for rabi harvest. The total fall registered in this intermediate period averaged 2.27 inches.

*Kharif.*-- The Kharif season was eventful. There being <sup>Crops.</sup> no pre-monsoon showers, sowing commenced a fortnight later than usual and protracted till the first week of Mchir (August). Indifferent weather conditions did not warrant cultivation on as wide a scale as in the previous year. At the initial stage the area sown to cotton was 70 per cent., to jawar 25 per cent., to castor 21 per cent., and to miscellaneous oil seeds 61 per cent. less than in the corresponding period of last year.

Owing to poor rainfall at sowing time much concern was felt for the seed sown in a few areas of Karimnagar, Mahbubnagar, Nalgonda, Aurangabad, Raichur and Bidar. Though it germinated satisfactorily an average fall of 48 cents in the 3rd week of Amardad was of little use. The

sprouts appeared in weak condition. Further sowing was impeded. The need for more adequate rain was urgently felt in some tracts of Adilabad, Mahbubnagar and Raichur.

When the crop reached to the first weeding stage in the second week of Shahrevar (July) there was practically no rain and it began to wither in some places of Karimnagar, Aurangabad, Bir, Gulbarga, Osmanabad and Raichur. At the same time insects appeared and ravaged the tender blades in parts of Jagtiyal (Karimnagar) and Gangawathi (Raichur). A week later some tracts of Warangal, Karimnagar and Mahbubnagar also reported insect menace. Crop in Yadgir (Gulbarga) was subject to a plant disease and castor in Nalgonda and Mahbubnagar suffered from cut worms. Thus the kharif crops which resulted from many such adverse circumstances suffered again from heavy rains in parts, once at the end of Shahrevar (July) and again after a week's interval, in Mehir (August). Though insect attack subsided in the heavy rains the crop in a few low-lying tracts was partially submerged and the final weeding operation was interrupted.

A break in the monsoon then ensued and the prospects of the crop improved; but the spell of warm weather being a little too long, the condition of the crop in parts of Gulbarga, Raichur, Nalgonda, Medak and Mahbubnagar declined more seriously in the first two districts.

Harvesting commenced at the end of Aban (September) and terminated in the first week of Isfandar (January), the normal reaping season being middle of Azar to end of Daj. Final picking of kharif cotton continued till the beginning of Farwardi (February).

*Abi.*—Due to poor rainfall abi sowing was deferred till the fourth week of Amardad (June) a fortnight later than usual and continued in parts till the end of Mehir. Seedlings were ready for transplantation after a month. The crop under irrigation sources grew satisfactorily but that in uplands, which depended on rainfall, was in an unsatisfactory condition for lack of moisture. In some tracts of Warangal and Karimnagar hoppers attacked the crop and did some damage. The rain which fell in Mehir was useful and enhanced the prospects of the broadcast crop. Water-supply in tanks was replenished and irrigation was easy to get. But insect menace persisted in Karimnagar

and plant disease was widespread in Medak and Nalgonda. Early in Azur 1344 Fash (October 1934), early sown paddy was reaped in parts, while in some places of Karinnagar, Mahbubnagar, Medak, Baghat, Gulbarga and Raichur the crop in maturing stage suffered from lack of moisture until moderate to heavy rains came at the end of Azur. In the first week of Isfandar abt harvest concluded.

Weather conditions seemed favourable and rabi culti- Rabi  
vation began in the last week of Mehr (August) three weeks ahead of the usual date (middle of Aban) in parts of Mahbubnagar, Nalgonda, Gulbarga and Raichur, and continued till the end of Azur. In some tracts of Raichur scanty falls of rain did not permit of cultivation in all the available rabi area. For the same reason sowing was interrupted for one clear month, between the end of Aban and the end of Azur. During the period of drought, early sown crop withered. Again when the weeding stage arrived the crop in certain regions of Gulbarga and Raichur stood sorely in need of moisture. Thus the absence of timely and adequate rains generally militated against rabi in Raichur. In a few parts also of Mahbubnagar, Gulbarga and Aurangabad, the crop suffered either from lack of moisture, plant disease or severe winter. Harvest began in the middle of Isfandar (January) and continued uninterrupted, except by a hailstorm early in Farwardi (February) in some regions of Adilabad and Osmanabad.

Tabi sowing commenced three weeks earlier than usual Tabi  
in Telingana, in the first week of Bahman 1344 Fash (December 1934), and continued till the third week of Isfandar. The crop was weeded and irrigated in the usual course and had fairly normal season, except for a disease peculiar to tabi in stray parts of Medak, Nizamabad and Nalgonda and insect pests in Mahbubnagar. Harvesting was done between Khurdad and Thir.

The area and outturn of principal crops harvested during the year under review are as hereunder :

#### Agricultural Stock

Water and fodder supply was reported to be generally adequate in Mehir and Aban 1343 F and Azur 1344 F. During the other months scarcity was felt in a few parts, more keenly in Gullbarga and Raichur. Fodder shortage was pronounced in parts of as many as 13 districts during the first three weeks of Shahrewar (July) 1343 Fasli. Contagious diseases among cattle were prevalent in places of many districts throughout the year under review, Isfandar being the only healthier month.

#### Grain Market

The retail price of wheat which was 8½ seers at the beginning of the year appreciated to 8¼ seers in Azur and declined to 8½ seers in Bahman. The price further dropped by small degrees and touched 9¼ seers when the year under report closed.

On the other hand the prices of rice and jawar, which stood at  $8\frac{1}{4}$  and 16 seers respectively per O.S. Rupee at the beginning of Amardad advanced to  $7\frac{1}{2}$  and  $13\frac{1}{2}$  seers respectively at the end of the year.

*Rainfall and seasonal conditions from 16th Thir to end of Aban 1344 Fasli.*

(a) *The South-West Monsoon* : -The south-west monsoon burst in proper time, in Amardad 1344 F. (June 1935), the northern parts of the Domains receiving moderate to heavy falls in Amardad (June) and Shahrewar (July). Then followed three weeks of light showers. The monsoon thereafter strengthened but distribution of rain was defective. In some parts of Warangal, Karimnagar, Nizamabad, Nalgonda and Raichur more rain was urgently required, while in certain tracts particularly in Nander and Bidar the fall was so continuous and heavy that the standing crops were discoloured.

The average for the south-west monsoon was 28.96" as compared with 27.25" in the same period last year and 25.26" normal for 14 years.

The winter months were ideal for the growth of rabi crops.

*Kharif* : -It was sown early in Amardad (June) under <sup>Crops.</sup> ideal conditions. The showers in Thir (May) were of use for the final turning of the sod. Early in Amardad (June) rainfall was general, Aurangabad registering 8.25", and sowing began in Karimnagar, Mahbubnagar, Nalgonda, Aurangabad, Raichur and Bidar. The other districts followed the monsoon advanced but in certain tracts of Nalgonda seeding operations were suspended for a time owing to deficient rains. It continued to rain in Shahrewar (July). The excessive soil moisture affected the crop in tracts of Parbhani, Nander and Bidar, but Raichur went dry; in the first week the crop began to wither and an attack of caterpillar was reported. It received a few falls subsequently. The need for more rain was greatly felt in that district as well as to some extent in parts of Warangal, Medak, Nalgonda and Osmanabad. Insects appeared in parts of Warangal and Nalgonda. The crop, on the whole made good growth and was ready for weeding early in Shahrewar (July).

In Aban (September 1935) the monsoon weakened and only light showers fell. The change was welcome and the crop ripened in the warm weather and harvesting commenced in Aurangabad, Bir, and Nalgonda in the middle of Aban. The crop in Raichur continued to stand in need of moisture. The estimated yield of kharif crop is 66 per cent. of the normal as compared with 60 per cent. in the previous year.

(ii) *Abi* : - Cultivation of the crop commenced in due time favoured by the pre-monsoon showers. Sowing commenced as early as the first week of Amardad (June) in Karimnagar, Mahbubnagar, Nalgonda, Aurangabad, Raichur and Bidar. It sprouted well and gave promise of good crop. Weeding was done at intervals between the first week of Shahrewar (July 1935) and the middle of Mehir (August) 1935. From nurseries, seedlings were transplanted at the end of Shahrewar, (July). A hopper attack and a plant disease were reported from certain tracts of Karimnagar and Medak respectively and they continued from early Mehir (August 1935) to the middle of Aban (September 1935). A similar menace appeared in parts of Warangal, Nizamabad, and Raichur at the end of Aban (September 1935). The damage sustained was slight. The estimated yield was 56 per cent. of normal, as compared with 58 per cent. last year.

(iii) *Rabi* : - Rabi cultivation commenced in due time, Raichur being first to sow the seed at the close of Mehir (August 1935) and in the first week of Aban (September). Rabi sowing was retarded in the few parts of Parbhani and Gulbarga on account of excessive falls. Subsequently it progressed unimpeded in all tracts of the country and the crop was being weeded in parts of Raichur when the year closed.

*Sugarcane* : - The crop had a normal season throughout, irrigation being available from tanks and wells and canals. The estimated yield was 71 per cent. of normal.

*Market* : - The average retail prices of wheat and jawar, which were  $8\frac{1}{2}$  and  $18\frac{1}{2}$  seers respectively at the beginning of the year, slightly fell to  $9\frac{3}{4}$  and  $14\frac{3}{4}$  seers per O.S. Rupee at the end of the year. The price of rice, however, went up from  $8\frac{1}{2}$  seers to  $7\frac{1}{4}$  seers during the same period.

**(b)—Monthly Report on Cotton 1344 Fasli**

---

## MONTHLY COTTON REPORT.

### AZUR 1341 FASLI.

*Weather and crop condition* : --The first three weeks of the month of report were characterised by light showers, sporadic in parts. More soil moisture was needed both for the kharif crop which was in boll-forming stage and also for the sowing of Rabi in the Telingana area. Kharif cotton in Gulbarga and Raichur was hard hit and began to wither in parts of the above districts. Rabi sowing was deferred in some areas of Raichur, where the early sown tender crops languished. Thus the general crop condition was identical with that in the previous year. During the last week of the month, heavy showers fell in Raichur and relieved the anxiety of the growers. Kharif prospects improved and rabi sowing was resumed. In the other parts of the Dominions, light to moderate rain in the same week was a desideratum. The condition of the kharif crop was fair and rabi sowing was in general progress when the month closed. The average rainfall for the month was 2.59" as compared with 3.02" and 2.56" respectively in the corresponding period of 1343 and 1342 Fasli.

*Area, annawari and yield* :- According to the last forecast returns, the total area under kharif and rabi is 2,978,505 acres, as compared with 3,657,023 acres in 1343 F. or 18 per cent. decrease.

Probable yield is estimated at 419,402 bales, as compared with 570,322 bales in the corresponding period of the preceding year. The decrease in yield is not proportionate to the reduction in acreage but to the caprice of the monsoon. It is too early to estimate the condition of rabi crop. The comparative figures are shown below :—

#### NO. 2. DAI 1344 FASLI.

*Weather and crop condition* :—The month of Dai was practically dry except for a few cents of rain in most parts at the beginning of the month. Bir, Gulbarga, Osmanabad and Bidar remained rainless. The condition of the kharif crop was fair as was reported in Azur and picking commenced in some places. Rabi sowing continued in parts and young crop in others was growing satisfactorily.

*Area, annawari and yield* :—Since the last report no more returns of area have been received hence the acreage is the same as was shown in the previous report, namely, 2,978,505 (acres). Rabi sowing not being complete, more returns of areas will be available later.

## No. 3. BAHMAN 1344 FASLI.

*Weather and crop condition* :—No peculiarities characterised the weather conditions during the month of report. It was cold and dewy at nights. Occasional clouds, however, were not favourable to the standing crop in a few parts of the districts of Aurangabad and Bir.

Kharif cotton is still being picked in parts and rabi is growing well except in parts of Raichur on account of protracted draught.

The monsoon was inactive during the first week of the month and the fall was uneven—

<i>Rainfall (In inches)</i>			except in Adilabad district. The month in Raichur went wholly dry while in seven other districts the average did not amount to even an inch. More rains were desired to help further sowing in Warangal, Medak, Nalgonda, Osmanabad and Raichur. Rainfall in the second week was more encouraging and well distributed in all parts (except Aurangabad). Seeding operations continued and the early sown crop looked

well. In the following week the Western sector fared ill, the district average in that area being less than an inch. More moisture was needed both for the germination and growth of the seed already sown and for that of the sprouts in parts of Nalgonda and Osmanabad. During the rest of the month the monsoon was weak and rainfall poor, the principal cotton districts recording not even an inch a week on the average. Crop in Kallam and Parenda (Osmanabad) and Gangawati and Sindhnur (Raichur District) was in distress for lack of moisture. At the end of the month the record of the rainfall showed 6.89 inches, as compared with 11.03 inches in the same month last year. Taking as a whole the crop appeared well and the early sown crop was being weeded.

*Area, annarvari and yield* :—Due to receipts of more returns the area under cotton at the end of the month increased by 20,759 acres or 1.5 per cent. upon the first report and 93.4 per cent. on the corresponding period of last year. Comparative better seasonal conditions warranted a larger area being brought under cotton now than in the preceding year. It is too early to determine the anna

estimate of the crop.

Distributed according to Trade Description of cotton, the area falls under the following categories :—

Gaorani	..	..	727,725	635,840	925,564

#### NO. 11. MEHIR 1344 FASLI.

*Weather* : The monsoon in the first week of the month of report was weaker than in the preceding week. Only scattered showers fell and the average was only 5 cents. The spell of a fortnight of droughty weather ceased the growing crop in weeding stage to droop in parts of Nander, Gulbarga, Osmanabad, Raichur, Bidar and Nalgonda, while in other areas the need of rain was imperative.

During the rest of the month the monsoon strengthened and a weekly average of  $2\frac{3}{4}$  inches of rain fell. Though it was all unevenly distributed yet the crop in general revived, except in some tracts, notably in Raichur district. At the close of the month, soil moisture was reported to be insufficient for the crop in a few parts of Warangal, Karimnagar, Nizamabad and Nalgonda.

The average fall in the month was 8'16", as compared with 6'28" in the corresponding month, last year.

*Area, unmaroari and yield* : More returns having been received since the last report, the area under cotton has advanced to 2,874,817 acres, as against 2,615,646 in the corresponding period of the preceding year, an increase of 99'5 per cent. on the previous month's figure and 9'5 per cent. on the preceding year.

The condition of the crop is fair to good in general

It is too early to estimate the probable yield of the crop.

## No. 12. ABAN 1344 FASLI.

During the first week of the month light to moderate rain fell, replenishing the soil moisture needed for the crop in parts of Warangal, Karimnagar, Nizamabad and Nalgonda as reported previously. In some regions of Nander and Bidar excessive moisture tender to discolour the plants, while the crop condition in Deodrug (Raichur District), where only a few showers fell, caused anxiety.

In other parts of that district rabi cotton sowing began. In the second week of the month rainfall was general but Raichur went dry. In Marathwara the fall was so heavy that a break was desired for facilitating weeding of late-sown crop and for picking of early cotton which actually commenced at intervals in Aurangabad and Bir. During the second half of the month only light rain fell in parts and it was a welcome change generally, while in Raichur the crop showed signs of deterioration for lack of moisture.

The average rainfall for the month was 5.86" as compared with 4.33" in the same month last year. At the end of the month, cotton was being picked in parts of Marathwara and rabi sprouted in some places of Raichur, doing well, while sowing was in progress in the same district and in Gulbarga and Nalgonda.

*Area, annawari and yield* : - No more returns have been received since the last report ; hence the area is the same as in the previous month, viz. 2,874,817 acres as compared with 2,615,646 acres in the previous year, an increase of 9.5 per cent.

The estimated condition of the crop is 10 annas, as against 8 annas in the preceding year.
